ABSTRACT: Encryption of image plays a very important role, it helps to save the image from the unauthorized attack. Image processing usually refers to digital image processing, but optical and analog image processing also are possible. MRI is widely used in pre operative and post operative evaluation of the patients. Magnetic Resonance Imaging (MRI) is a powerful visualization technique. It allows images of the internal anatomy to be acquired in a safe and non invasive way. It is based on the principles of Nuclear Magnetic Resonance (NMR). it allows a vast array of different types of visualizations to be performed. In this paper, we are going to use the splines and masking algorithm to detect MRI images.

Keywords: Kochank-bartels splines, MRI, Image Processing, Masking Algorithm
